TAILGATE SERVICE BULLETIN

CHAIN LENGTH

When using the PHIL Autogate® Tailgate on your off-highway trucks, use only enough chain to hook the unit up and still maintain a slight amount of slack.

The Autogate® Tailgate normally requires only minimal maintenance and attention; however, the chain length can affect its proper performance. You should periodically check the bushings and chain bolts for measurable (10% or greater size reduction) wear and if noted, obtain replacement parts from Philippi-Hagenbuch, Inc.

A daily visual inspection should be done to make sure the tailgate and its related component parts are in proper place and that no damage or fatigue has affected critical areas such as bolts, nuts, and other fastening areas.

You may reach us for information on the Autogate® Tailgate and other PHIL products at:
